**THE HONOURABLE JOHN YAREMKO, B.A., Q.C.
REGISTRAR GENERAL**

Foreword

I take pleasure in presenting the 92nd Vital Statistics Report compiled by the Office of the Registrar General. This report is prepared in two parts.

Part I indicates the trend over the past years in the general state of health of the people of Ontario. Such general trends emphasize certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1961.

In conclusion, may I state that, while this report is primarily of interest to certain professions and agencies, it will give other interested persons an insight into the vital statistics concerning births, marriages and deaths in the Province of Ontario.

General Mortality

The trend in general mortality over the period 1938 to 1962 is shown in Table M. Tables N to P illustrate the general mortality by age and/or cause. Special detailed tables for specific causes are shown in Tables Q to T. Special cross classification of accidental and violent deaths is shown in Table U.

(1) Per cent of total deaths.

(2) Rates per 100,000 population.

(3) The former method of coding tuberculosis deaths was amended effective January 1st, 1962, by the Dominion Bureau of Statistics in order to comply with the mortality classification under the International Classification of Diseases. This has resulted in a considerable increase in the number of deaths when compared with the method of coding deaths in previous years.

(1) The former method of coding tuberculosis deaths was amended effective January 1st, 1962, by the Dominion Bureau of Statistics in order to comply with the mortality classification under the International Classification of Diseases. This has resulted in a considerable increase in the number of deaths when compared with the method of coding deaths in previous years.
